Webinar for the Students

Webinar organized for the student's By Prof. Neeraj Malviya

BOOLEAN ALGEBRA

Boolean algebra was firstly introduced by British Mathematician in 1854 in his research paper "Laws of Thoughts". It has wide applications in Electrical Engineering and Computer Science. So it is a common branch of pure and applied mathematics.

To define Boolean algebra we firstly define function and binary operations.

Function: A function consists of three objects: two non-empty sets X and Y (which may be equal but need not be) and a rule f which assigns to each element x in X a single fully determined element y in Y .

Visualization of a function on different sets
